

Chile's Largest Institutional Investor Gathering

August 27th & 28th, 2012

The second version of the Chilean Investors Forum was a specialized gathering of institutional investors, fund managers and international industry leaders for a discussion of asset allocation, regulatory change and investment strategy across asset classes, including private equity, real assets, hedge funds and equities. Over the course of two days, more than 300 executives from Chile, broader Latin America and the international fund industry came together to exchange ideas and engage one-on-one to address pressing issues and explore opportunities in today's turbulent markets.

This investor-focused event provided a due diligence platform for the leaders of Chile's large and sophisticated pension system (the second largest in Latin America), the managers of Chile's ever-increasing private wealth reserves and the leaders of Chile's robust private business sector to explore innovative approaches to wealth and asset management, investment strategy and to discuss opportunities for growth in the near future.

Once again MundoChile was present in this important event providing simultaneous interpretation services, with our well known high quality and professionalism.
