Chile's Premier C-Level Renewable Energy Event

10–11 September 2013, Santiago, Chile

INTERNATIONAL RENEWABLE ENERGY CONGRESS (CIREC)

Hotel W, Santiago, September 10 and 11, 2013

On September 10 and 11, the Chilean International Renewable Energy Congress was held in Santiago de Chile. Several factors, as important as the country 5.1% GDP growth until 2015, a mining industry with a high growth capacity in need of large amounts of energy, together with a high probability that the country energy needs will double, made this event a must for the world renewable energy professionals.

High-level attendants, speakers of excellence, and related presenting companies made this event a scenario to appreciate Chile's importance for the renewable energy sector. It is important to mention that Chile has 16,000 MW geo-thermal energy potential.

The Congress lasted two days. During the first day, general issues were discussed, and during the second day there was a space for each type of energy.

Again, MundoChile had the opportunity to provide simultaneous interpretation services during every lecture in this important meeting delivering, as usual, the highest quality service.
